What is a Columbarium?

For thousands of years civilizations have built resting grounds—cemeteries—as permanent places to inter and remember their loved ones. In addition to offering traditional ground burial, many cemeteries have a columbarium, which is a building or structure dedicated to holding remains of those who have chosen cremation. Urns holding cremated remains are placed in niches within the columbarium.

Cremation Options at Bellefontaine

In addition to offering traditional ground interment of cremated remains, Bellefontaine has two columbaria. The open-air Lakeside Columbarium, shown on the cover, is nestled between two lakes and along our brook. Its inner courtyard has benches and a fountain for resting and contemplation. Paths wind through the area for strolling and enjoyment of the landscape.

Bellefontaine's historic Hotchkiss Chapel, situated on the river bluffs, has an indoor columbarium with 665 niches. A separate brochure describes this lovely building.
